

conger

Initial data inspection

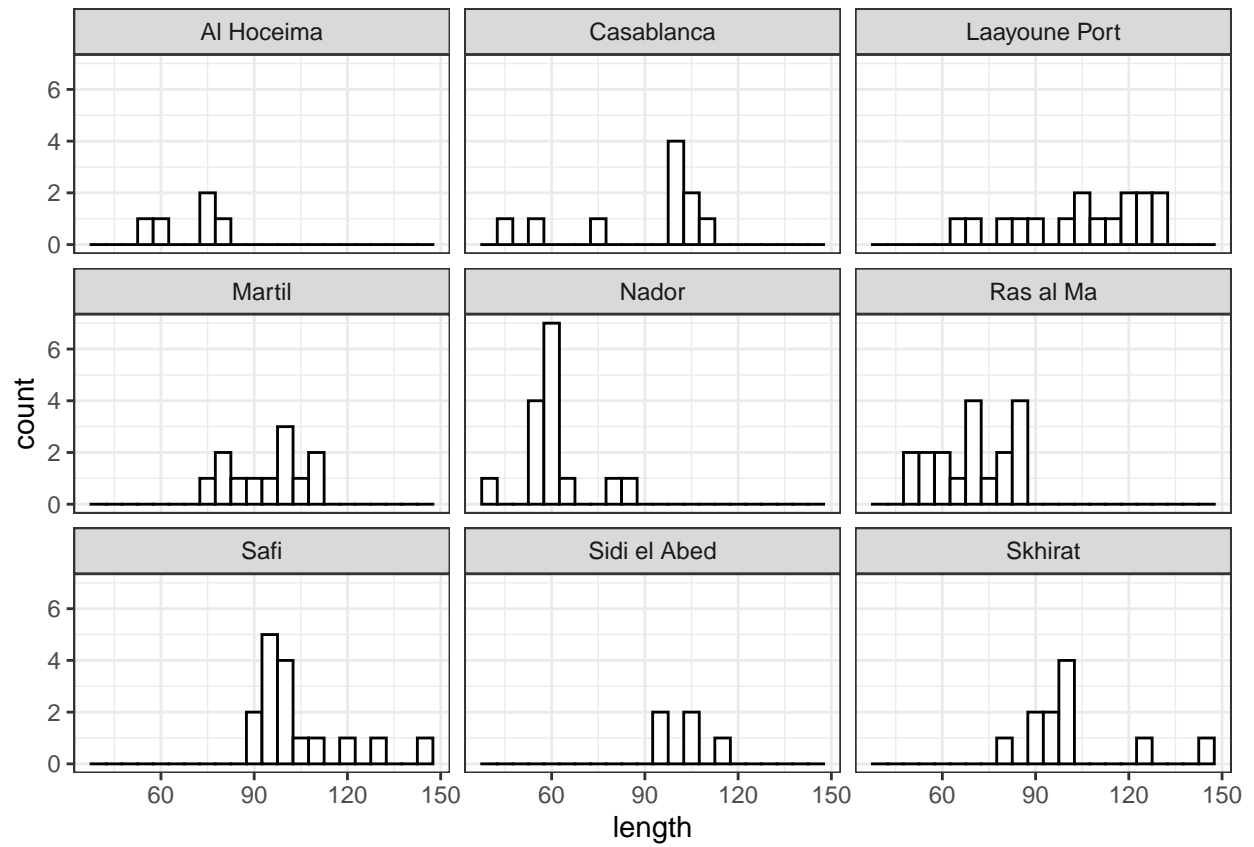

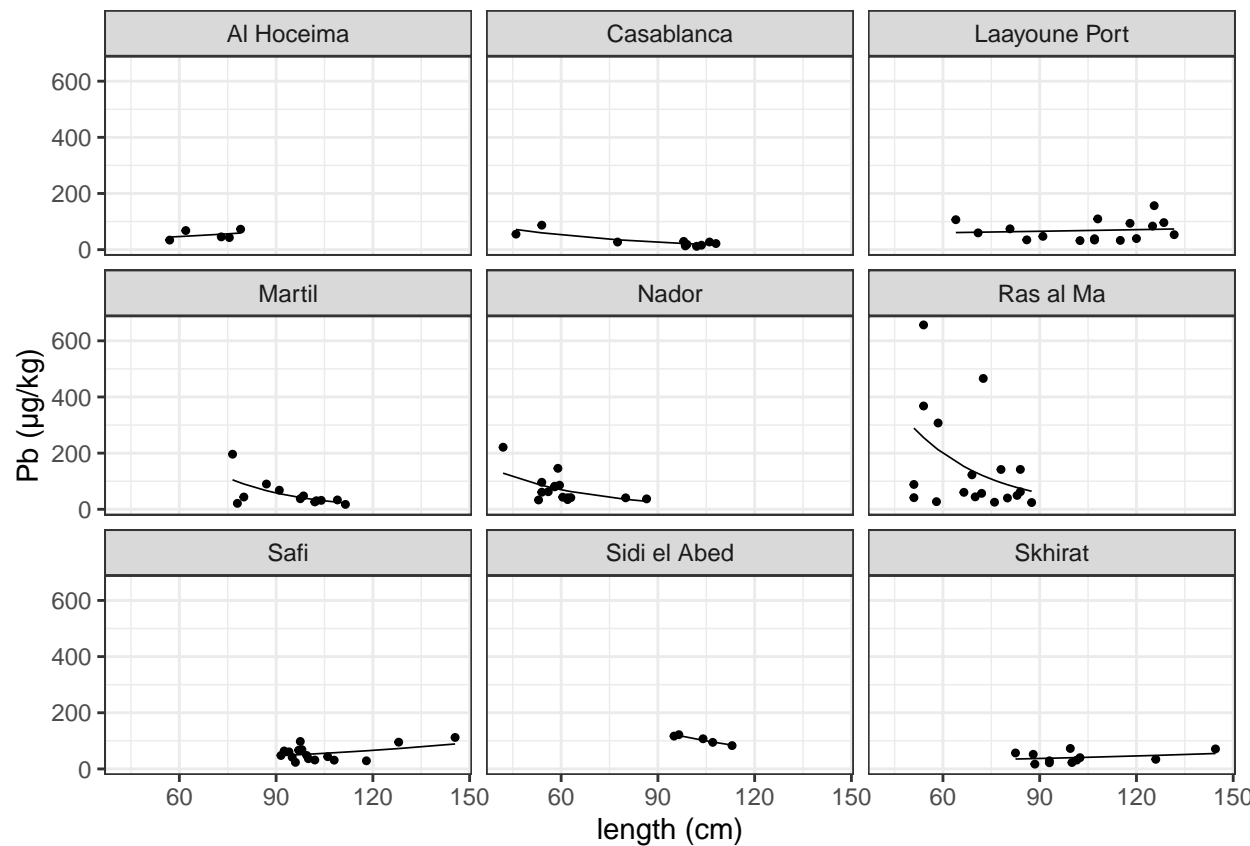

Fig 1 Overview of data distribution

Plotting the model results

Fig 2a Raw data and GLM predictions of contaminat levels in COnger per Station as panel

Fig 2b Raw data and GLM predictions of contaminat levels in COnger in single graph

Tab 1 Model statistics. Coefficients give the mean contamination at mean length of all congers on the log scale (i.e. exp of estimate provides the values given in Tab 2). p-values (last column, now header) indicate whether they are different from 0.

Coefficients with the suffix “:scale(length...” give the slope for the respective station. p-values (last column, no header) indicate whether the slopes are significant (i.e. different from 0) - have to double check if that is the correct interpretation but I think so.
